APACHE 2.0 STIG REVISION HISTORY

Version 1, Release 5

23 October 2015

Developed by DISA for the DoD

UNCLASSIFIED

REVISION HISTORY			
Revision Number	Document Revised	Description of Change	Release Date
V1R5	- Apache Unix and Windows Server STIG	- Updated the discussion, check and fix for V-2246. Changed the text to reflect that Apache 2.0 is EOL.	23 October 2015
V1R4	- Apache Unix and Windows STIG Overview	- Updated the document to the new template, replacing references to FSO with RE. - Updated the support email address to the new address.	24 July 2015
V1R4	- Apache Unix and Windows Server STIG	- Created WG345 which does not allow export ciphers to be used. - Updated 13 vulnerabilities - changed IAO to ISSO and IAM to ISSM.	24 July 2015
V1R4	- Apache Unix and Windows Site STIG	- Updated 2 vulnerabilities - changed IAO to ISSO and IAM to ISSM.	24 July 2015
V1R3	- Apache Unix and Windows Site STIG	- Updated the discussion and check for V-2249. The current vulnerability specifies that TLS 1.0 needs to be implemented for remote administration of the web server. The text was changed to make the approved versions to be FIPS 140-2 approved TLS versions and the check was updated to make sure that non-approved versions are disabled. Also included a reference to NIST 800-52 for best practices. - Updated the check and fix for V-13694. The current vulnerability specifies that TLS 1.0 or greater needs to be implemented for public web servers when authentication is used. The text was changed to make the approved versions to be FIPS 140-2 approved TLS versions and the check was updated to make sure that non-approved versions are disabled. Also included a reference to NIST 800-52 for best practices. - Updated the title, discussion, check and fix for V-2262. The current vulnerability specifies that TLS 1.0 or greater needs to be implemented for private web servers. The text was changed to make the approved versions to be FIPS 140-2 approved TLS versions and the check was updated to make	23 January 2015
